Preface by the General Chair

August 25, 2015

Welcome to the 2015 Conference on Empirical Methods in Natural Language Processing. EMNLP is annually organized by SIGDAT, the Association for Computational Linguistics' special interest group on linguistic data and corpus-based approaches to NLP. This year the conference will be held on September 17–21 in the enchanting city of Lisbon, Portugal.¹

EMNLP has continued to increase in prominence as one of the most important conferences in Natural Language Processing (NLP). This year the conference has experienced an unprecedented boost in submitted papers. I believe that this reflects both the growth of the NLP field and also the health and strength of the conference itself, with a history of many years of solid work. With this level of interest at submission time, we are also expecting a record attendance. The conference will span a five-day period this year, and it requires a growing organization structure.

Some of the features introduced in EMNLP 2014 will continue this year (e.g., tutorials, new chairs, posters as parallel sessions, flat rates and flexibility for tutorials and workshops, etc.). We also introduce some innovations, like a revised selection process for which talks are presented as talks versus posters.

This year I had the privilege of coordinating the conference from my General Chair position. This has been a very instructive and enriching exercise which showed me the conference as a whole, from many different angles. Prefaces in the proceedings invariably praise the team of organizers. This one will not be an exception. Organizing a large conference as EMNLP requires excellent people working as a team in multiple interrelated tasks. I have been lucky to work with an outstanding team of people, from whom I learnt a lot. These aren't empty words. I would like to thank each and every chair for the hard work that made the conference a reality.

The Program Chairs, Jian Su and Chris Callison-Burch, did an excellent job at putting together a very interesting program with over 300 papers. They had to deal with a very large number of submissions, which exceeded even our most optimistic expectations. As a consequence, they were forced to be creative and to find solutions on the fly to adapt to the situation. They recruited the largest ever program committee and successfully managed a huge reviewing and decision making process under a very tight schedule. A real gift for the general chair. They complemented the program with very interesting keynote speakers, Yoshua Bengio and Justin Grimmer who will present exciting research topics for our community.

The EMNLP 2015 main conference is accompanied by 7 workshops and 8 tutorials during the first two days. The Workshops Chairs, Zornitsa Kozareva and Jörg Tiedemann, and the Tutorials Chairs, Maggie Li and Khalil Sima'an, conducted the selection processes in a joint effort with the other ACL conferences in 2015 (NAACL and ACL-IJCNLP). This has been the standard procedure from last years. It has the advantage of starting early, avoiding duplicated reviewing and allowing a more balanced selection among conferences. EMNLP attracted a varied and interesting set of workshops and tutorials, which gives more value to the conference.

Daniele Pighin and Yuval Marton were responsible for the always difficult and sometimes thankless task of putting together the conference publications. This is a very complex effort which involves coordination with almost everyone in the team under the pressure of hard publication deadlines. Yuval is serving in this position for a second year. Staggered two year terms for publication chairs is a new addition for

¹Conference website: <http://www.emnlp2015.org>

EMNLP starting this year, and we hope that it will be a permanent feature. In the first year, publication chairs will learn and do the bulk of proceedings compilation. During the second year their role will be more advisory, instructing and helping the first-year chair. This procedure will help the transmission of the necessary know-how from year to year. Thanks to Yuval and Daniele for accepting the challenge and making it work wonderfully. Finally, this is the second year that EMNLP uses a mobile app for the conference program (Conference4me). The publication chairs also coordinated the integration of the app with SoftConf, which is now smoother and more seamless.

The local organization team was led by André Martins and João Graça. They did an amazing job, working hard and with all the complexities and subtleties of local arrangements. One of the keys for the success was the creation of a large team of local organizers with clearly defined roles and responsibilities. They appointed very committed people: Isabel Trancoso (Local Publicity Chair), Fernando Batista (Handbook Chair), Bruno Martins (Website and App Chair), Luísa Coheur (Student Volunteer Coordinator), and Helena Moniz (Local Arrangements Chair). Thanks to all. I am especially pleased about the new website, which was revamped and looks more professional everyday. This is certainly a good investment for the future.

A large conference as EMNLP needs to focus on dissemination activities too. Barbara Plank acted as the international Publicity Chair. She did a fantastic job and coordinated very well with the local publicity and the website chairs. The calls for papers, calls for participation, and main news of the conference were timely distributed through ACL, the usual distribution lists, and also through the conference website and two Facebook and Twitter accounts. The EMNLP2015 Twitter account garnered more followers than in previous years.

I am really grateful to SIGDAT. Its secretary, Noah Smith, acted as the liaison between SIGDAT and the conference organizers. He was always available and ready to help with very good advice. SIGDAT also provided the funds for the student scholarship program. These grants help covering traveling expenses to a dozen of students. The committee appointed for collecting the applications and making the decisions was formed by Francisco Guzmán and Lluís Padró, who had to analyze all the information and decide the awardees in only a few days.

Another sign of the health of EMNLP and the field in general is the interest showed by sponsors. Thanks to the work of our sponsorship team, formed by João Graça and Hang Li, in coordination with the ACL International Sponsorship Committee, we got a record number of 13 sponsors for EMNLP 2015 (2 platinum, 3 gold, 6 silver and 2 bronze). In addition to these direct sponsors, we also have several smaller supporters, exhibitors, and institutional partners. We are extremely grateful to all these companies and institutions, which make a better conference possible at a more affordable registration fee.

Additionally, we counted on the invaluable help of Priscilla Rasmussen, supporting the local organization in all fronts with her broad experience. She took care of the registration process too. We also got very good advice, know-how, and helpful software and forms from last year general chair and local organizers, Alessandro Moschitti and Kareem Darwish. Thank you.

Finally, I would like to thank the authors of submitted and accepted papers, and all the attendees to the conference, who will be the main actors from September 17 to September 21, 2015. I am convinced that we will experience a fantastic conference, scientifically exciting and full of fond memories, in the unique environment of Lisbon.

Preface by the Program Committee Co-Chairs

August 25, 2015

Welcome to the 2015 Conference on Empirical Methods in Natural Language Processing! This year we received a record number of submissions. There were 1300 valid submissions. The 600 long papers and 700 short papers were allocated to one of 15 areas. The most popular areas this year were Semantics, Statistical Models and Machine Learning Methods, Text Mining and NLP applications, and Machine Translation.

Reviewing for a conference this size involves an enormous volunteer effort from many individuals. We are very grateful to our 30 area chairs and to the more than 900 researchers who reviewed the submissions. We accepted 312 papers (157 long and 155 short papers), representing a global acceptance rate of 24%. An additional 17 papers accepted by the TACL journal were presented at the conference as well.

To decide whether the accepted papers should be presented as talks or posters, we asked the area chairs, the reviewers, and the authors of accepted papers to vote on which papers they would like to attend. We showed the title of each paper and its abstract, but not its authors. 400 people provided their input. We selected talks based on popularity, while ensuring that each area was represented by at least one session. Our rationale for taking a vote was that papers that many people wanted to attend would be better served by presenting a talk in a large room, while papers with more specialized interest would benefit from the one-on-one interactions facilitated by posters. Rather than doing large plenary poster sessions, we have scheduled two parallel poster sessions with small batches of thematically similar papers that will be run simultaneously with the talks.

We selected best papers from a shortlist of 20 papers that were nominated by the area chairs. The best paper committee ranked the nominees, and based on their rankings we selected the following papers for the best paper awards:

- Best paper - *Broad-coverage CCG Semantic Parsing with AMR* by Yoav Artzi, Kenton Lee and Luke Zettlemoyer.
- Best paper - *Semantically Conditioned LSTM-based Natural Language Generation for Spoken Dialogue Systems* by Tsung-Hsien Wen, Milica Gasic, Nikola Mrkšić, Pei-Hao Su, David Vandyke and Steve Young.

IBM has provided a cash scholarship for us to award to the best student paper. This will go to Tsung-Hsien Wen, since he is currently a student. The following papers received an honorable mention for the best paper award:

- Honorable mention for best paper - *Traversing Knowledge Graphs in Vector Space* by Kelvin Guu, John Miller and Percy Liang.
- Honorable mention for best paper - *Building a shared world: mapping distributional to model-theoretic semantic spaces* by Aurélie Herbelot and Eva Maria Vecchi.
- Honorable mention for best paper - *Language Understanding for Text-based Games using Deep Reinforcement Learning* by Karthik Narasimhan, Tejas Kulkarni and Regina Barzilay.
- Honorable mention for best short paper - *Joint Lemmatization and Morphological Tagging with Lemming* by Thomas Müller, Ryan Cotterell, Alexander Fraser and Hinrich Schütze.

- Honorable mention for best short paper - *Semi-Supervised Bootstrapping of Relationship Extractors with Distributional Semantics* by David S. Batista, Bruno Martins and Mário J. Silva.

This year we created a new “Best data set or resource” award, since so much work in our community is driven by data. The paper that receiving this inaugural distinction is:

- Best data set or resource - *A large annotated corpus for learning natural language inference* by Samuel R. Bowman, Gabor Angeli, Christopher Potts and Christopher D. Manning.

With two honorable mentions:

- Notable data set or resource - *That's So Annoying!!!: A Lexical and Frame-Semantic Embedding Based Data Augmentation Approach to Automatic Categorization of Annoying Behaviors using #petpeeve Tweets* by William Yang Wang and Diyi Yang.
- Notable data set or resource - *Modeling Reportable Events as Turning Points in Narrative* by Jessica Ouyang and Kathy McKeown.

We decided to give more awards than in past years by recognizing papers with honorable mentions and by creating the new best data or resource award. Our goal was to recognize roughly the top 1% of all of the submissions to the conference with awards (recognizing approximately the top 5% of accepted papers). We are very grateful to our invited speakers Yoshua Bengio and Justin Grimmer.

Yoshua Bengio is professor of Computer Science and Operations Research at the Université de Montréal. He is the author of two books and more than 200 publications, the most cited being in the areas of deep learning, recurrent neural networks, probabilistic learning algorithms, natural language processing and manifold learning. He co-directs the Canadian Institute for Advanced Research’s program on deep learning. He is on the board of NIPS. Professor Bengio’s research into deep learning has had a dramatic impact on the field of NLP in the past few years, and has invigorated interest in AI through machine learning.

Justin Grimmer is an associate professor of Political Science at Stanford University. His research uses statistical methods to examine American politics. He is the author of two books on the topic “Representational Style in Congress: What Legislators Say and Why It Matters” and “The Impression of Influence: How Legislator Communication and Government Spending Cultivate a Personal Vote.” His work has appeared in the American Political Science Review, American Journal of Political Science, Journal of Politics, Political Analysis, Proceedings of the National Academy of Sciences, Regulation and Governance, and Poetics. Professor Grimmer’s research points to exciting new directions for computational social science and how the field of NLP can facilitate research in many areas.

We thank them in advance for coming to the conference and sharing their insights.

We would also like to thank our general chair Lluís Márquez, André Martins and João Graça and colleagues for their excellent work with the local organization, and Yuval Marton and Daniele Pighin for doing an excellent job assembling these proceedings.

We thank SIGDAT for inviting us to serve as Program Co-Chairs of EMNLP 2015. We hope that the conference is an excellent one. Enjoy your stay in Lisbon!

Invited Speaker: Yoshua Bengio

Deep Learning of Semantic Representations

Abstract: The core ingredient of deep learning is the notion of distributed representation. This talk will start by explaining its theoretical advantages, in comparison with non-parametric methods based on counting frequencies of occurrence of observed tuples of values (like with n-grams). The talk will then explain how having multiple levels of representation, i.e., depth, can in principle give another exponential advantage. Neural language models have been extremely successful in recent years but extending their reach from language modeling to machine translation is very appealing because it forces the learned intermediate representations to capture meaning, and we found that the resulting word embeddings are qualitatively different. Recently, we introduced the notion of attention-based encoder-decoder systems, with impressive results on machine translation several language pairs and for mapping an image to a sentence, and these results will conclude the talk.

Biography: Yoshua Bengio received a PhD in Computer Science from McGill University, Canada in 1991. After two post-doctoral years, one at M.I.T. with Michael Jordan and one at AT&T Bell Laboratories with Yann LeCun and Vladimir Vapnik, he became professor at the Department of Computer Science and Operations Research at Université de Montréal. He is the author of two books and more than 200 publications, the most cited being in the areas of deep learning, recurrent neural networks, probabilistic learning algorithms, natural language processing and manifold learning. He is among the most cited Canadian computer scientists and is or has been associate editor of the top journals in machine learning and neural networks. Since '2000 he holds a Canada Research Chair in Statistical Learning Algorithms, since '2006 an NSERC Industrial Chair, since '2005 his is a Senior Fellow of the Canadian Institute for Advanced Research and since 2014 he co-directs its program focused on deep learning. He is on the board of the NIPS foundation and has been program chair and general chair for NIPS. He has co-organized the Learning Workshop for 14 years and co-created the new International Conference on Learning Representations. His current interests are centered around a quest for AI through machine learning, and include fundamental questions on deep learning and representation learning, the geometry of generalization in high-dimensional spaces, manifold learning, biologically inspired learning algorithms, and challenging applications of statistical machine learning.

Invited Speaker: Justin Grimmer

Measuring How Elected Officials and Constituents Communicate

Abstract: This talk will show how elected officials use communication to cultivate support with constituents, how constituents express their views to elected officials, and why biases in both kinds of communication matter for political representation. To demonstrate the bias and its effects, I propose to use novel collections of political texts and new text as data methods. Using the new data and methods, I will show how the incentives of communication contribute to perceptions of an angry public and vitriolic politicians. Among elected officials, the ideologically extreme members of Congress disproportionately participate in policy debates, resulting in political debates that occur between the most extreme members of each party. Among constituents, the most ideologically extreme and angry voters disproportionately contact their member of Congress, creating the impression of a polarized and vitriolic public. The talk will explain how the findings help us to understand how representation occurs in American politics, while also explaining how computational tools can help address questions in the social sciences.

Biography: Justin Grimmer is an associate professor of political science at Stanford University. His research examines how representation occurs in American politics using new statistical methods. His first book *Representational Style in Congress: What Legislators Say and Why It Matters* (Cambridge University Press, 2013) shows how senators define the type of representation they provide constituents and how this affects constituents' evaluations and was awarded the 2014 Richard Fenno Prize. His second book *The Impression of Influence: How Legislator Communication and Government Spending Cultivate a Personal Vote* (Princeton University Press, 2014 with Sean J. Westwood and Solomon Messing) demonstrates how legislators ensure they receive credit for government actions. His work has appeared in the *American Political Science Review*, *American Journal of Political Science*, *Journal of Politics*, *Political Analysis*, *Proceedings of the National Academy of Sciences*, *Regulation and Governance*, and *Poetics*.
